

ONLINE BOOK STORE

Presented by:

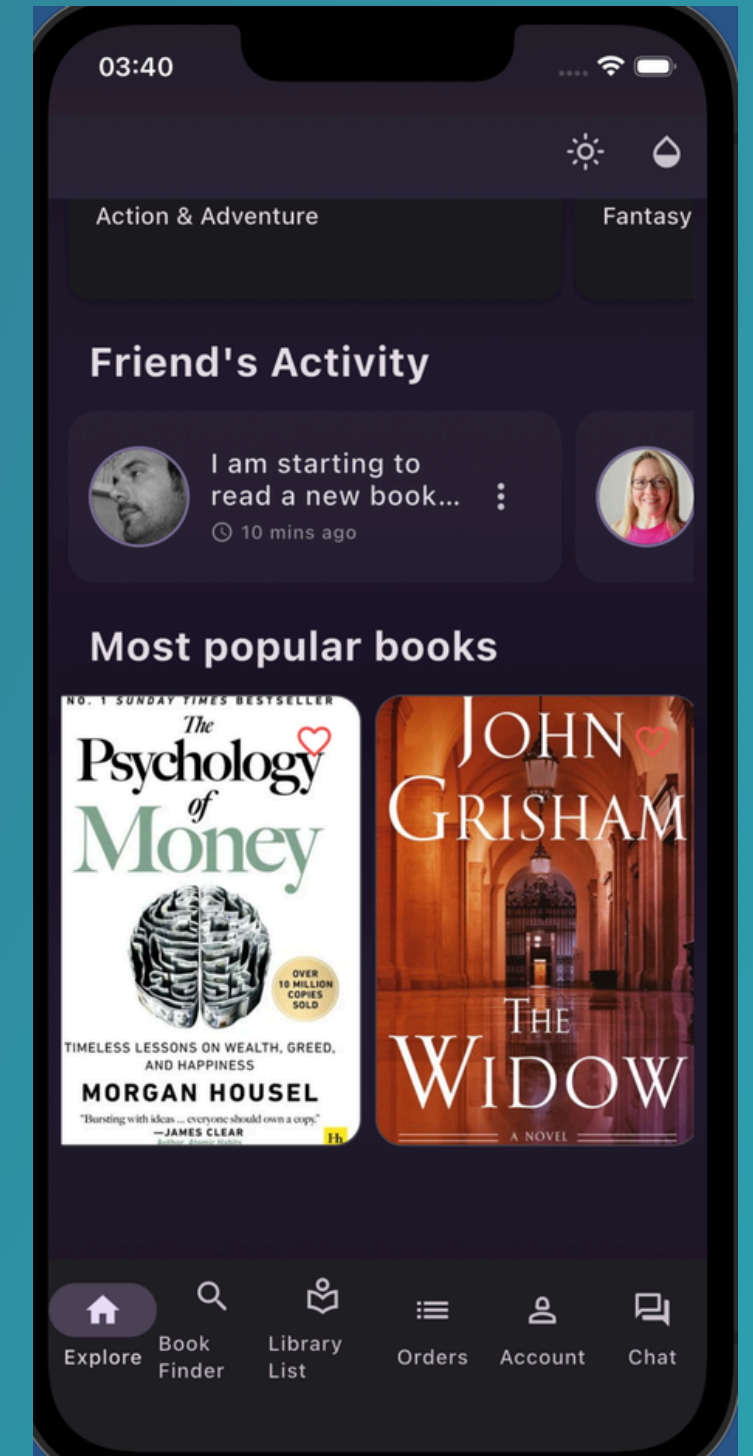

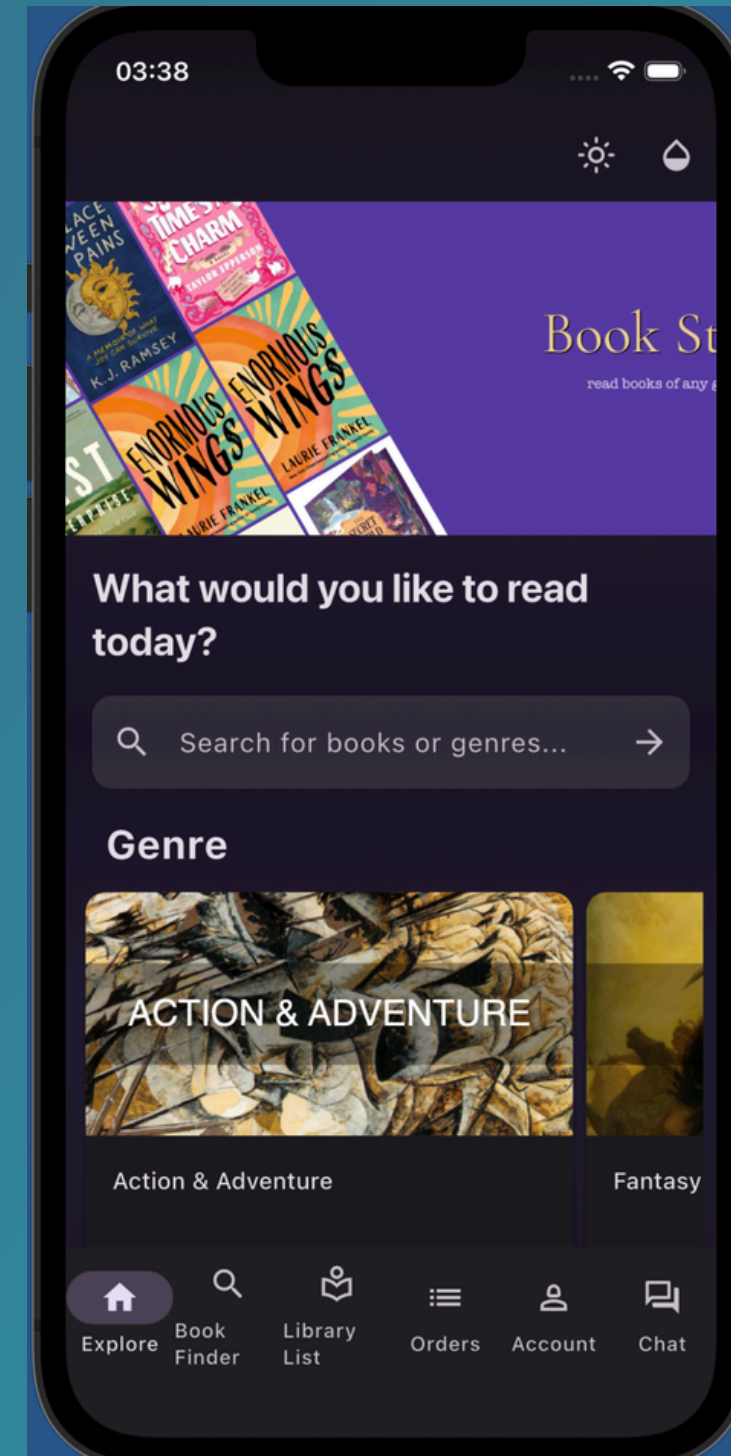

Tugelbayev Aidyn

Website:

SE-2427

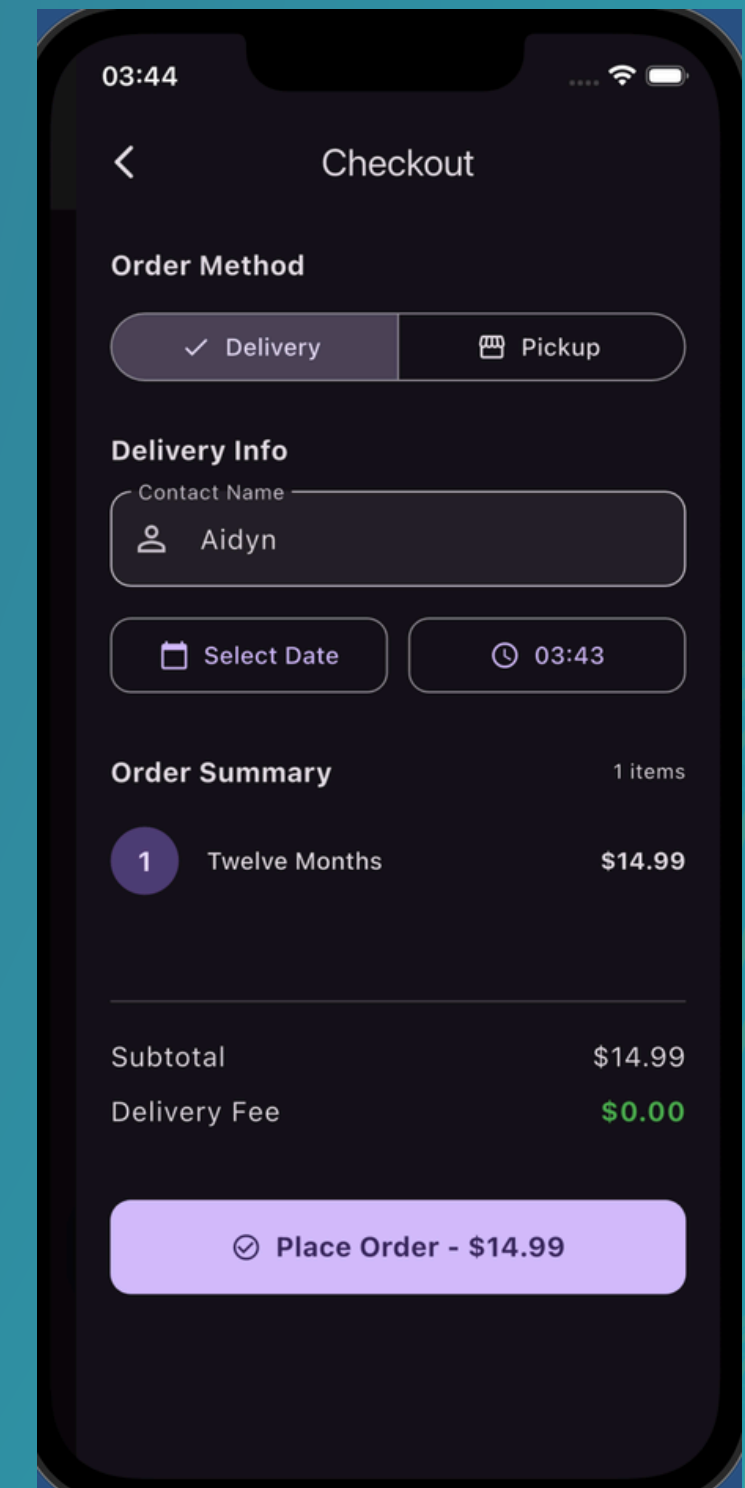

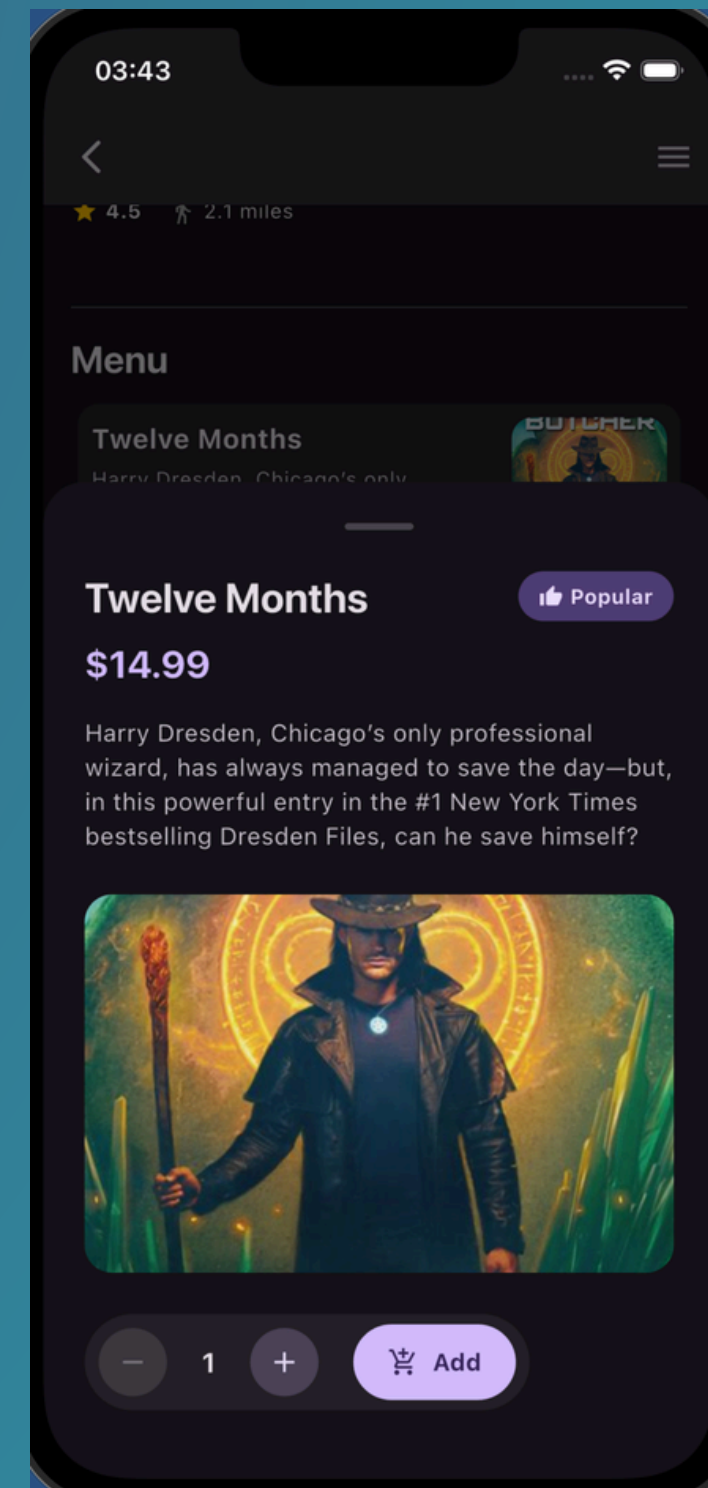

PURPOSE OF THE PROJECT

The main idea of this app is to sell books online. You can also learn a lot about a specific book by reading a preview. You can find the perfect book for yourself by exploring different genres and interacting with different users.

BOOK ORDER

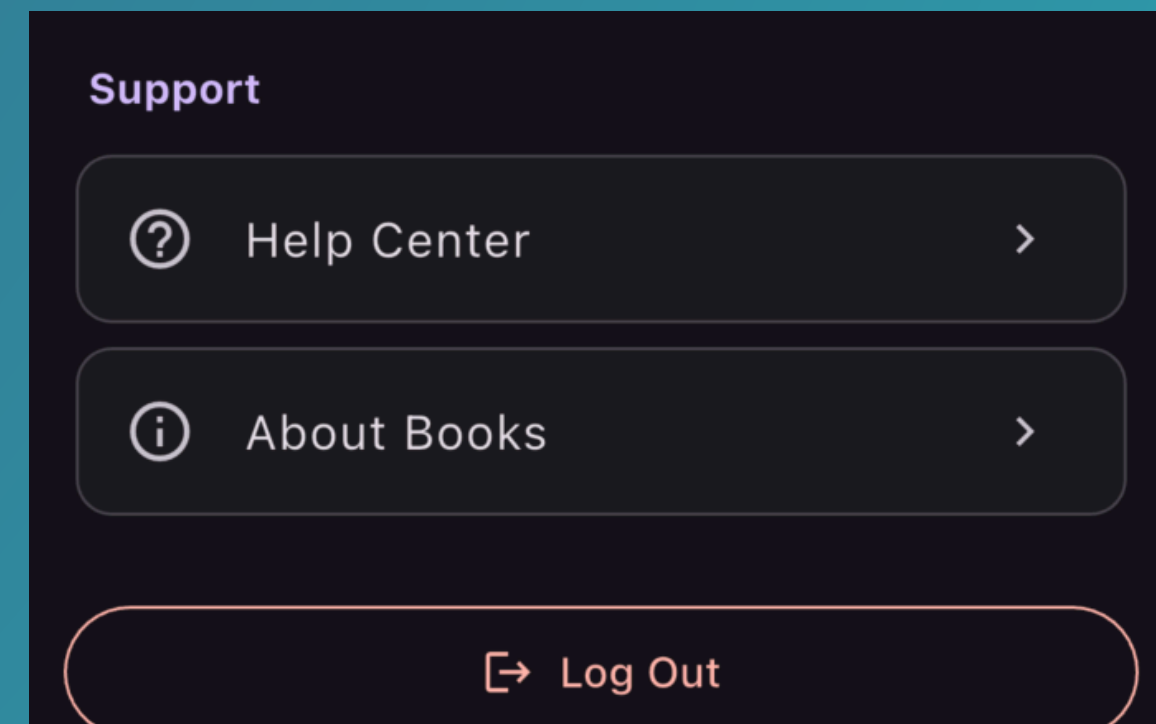

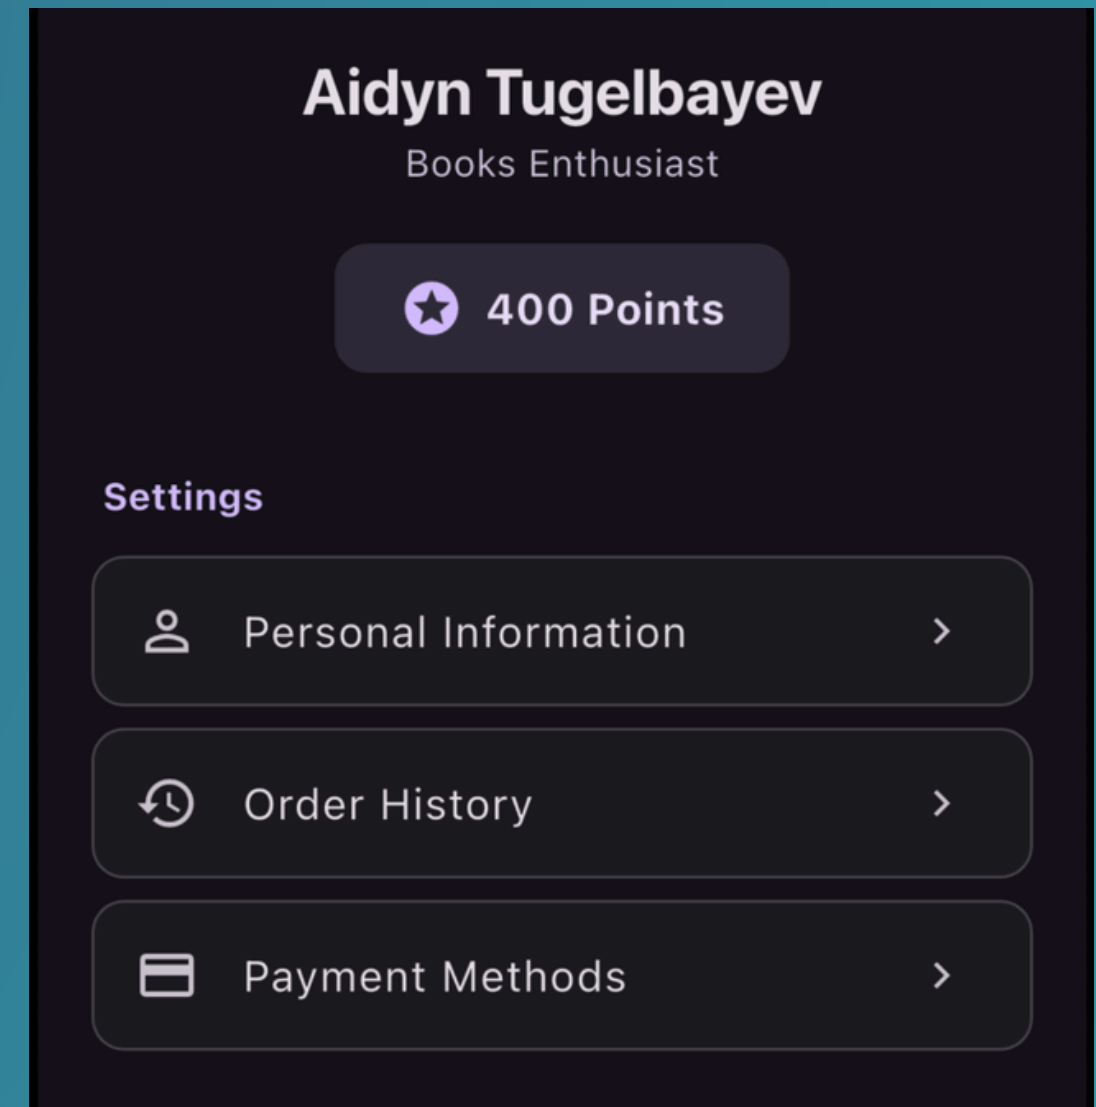

You can choose your favorite book and place your order, setting the delivery date and time. Once you place your order, it will appear in your orders.

MAIN FEATURES

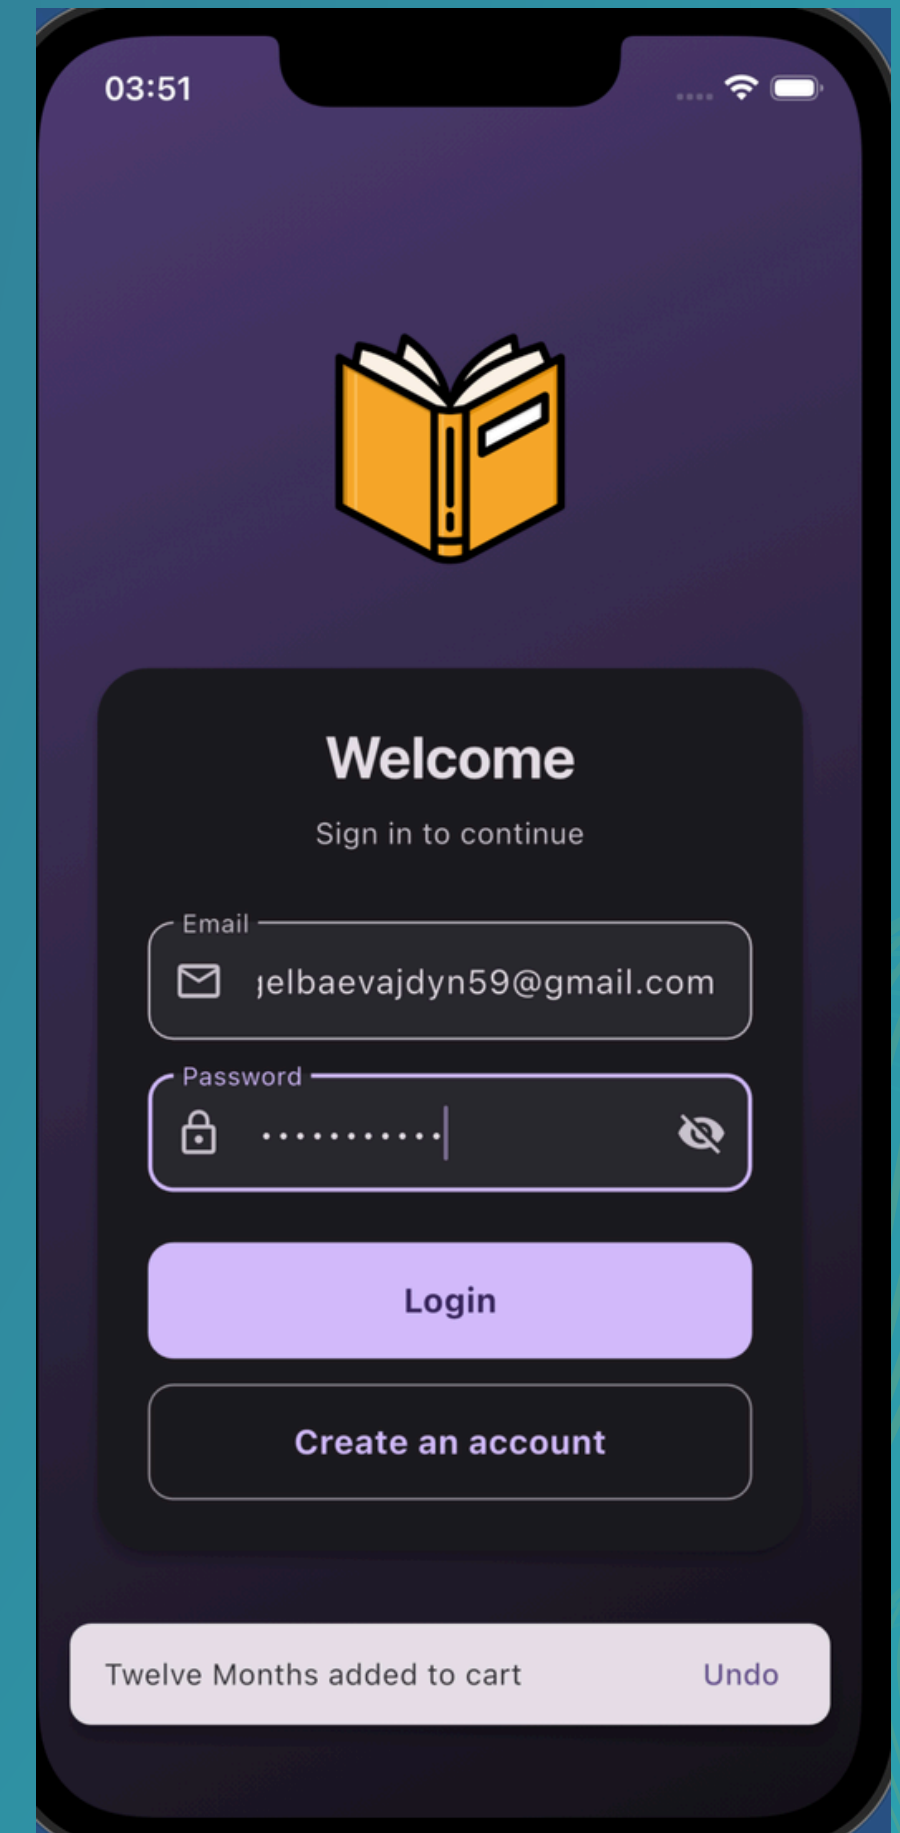

You can add a book you like to your library. For this, you receive 100 points. The number of points can be viewed in the account section.

You can also change your user name and surname in this section, or even log out of your account and register with another one.

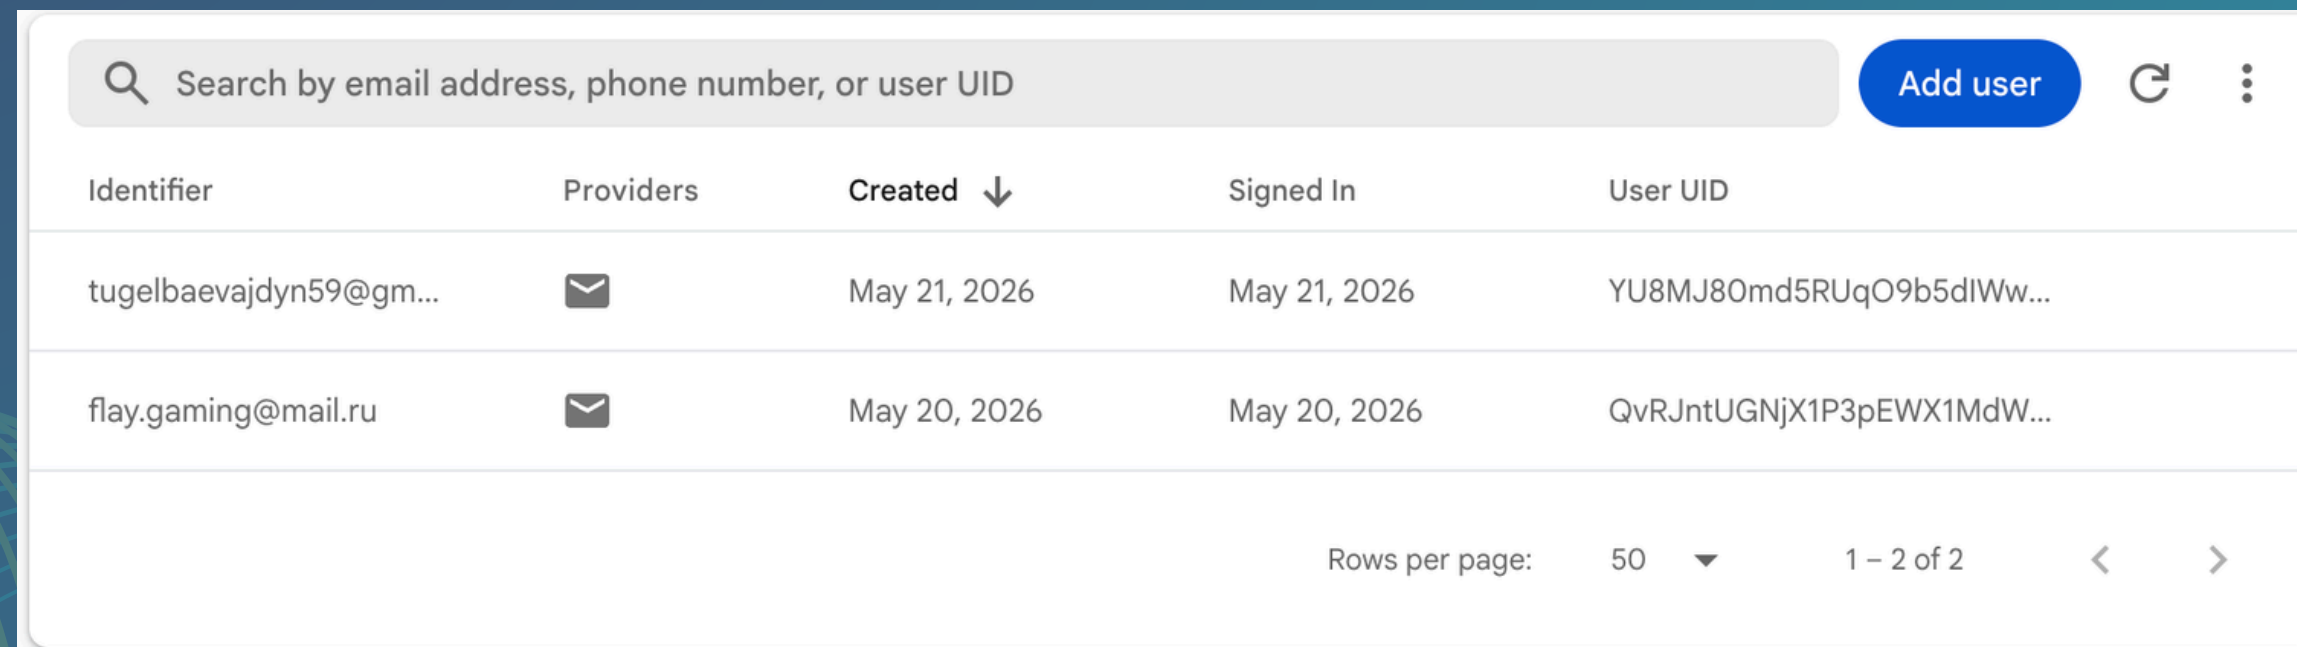

REGISTRATION SYSTEM

The app has a registration system. The first user creates an account by entering an email address and password. The user can then log out of their account and log back in to their existing account.

FIREBASE AUTHENTICATION

The screenshot shows the Firebase Authentication console interface. At the top, there is a search bar with the placeholder text "Search by email address, phone number, or user UID". To the right of the search bar is a blue "Add user" button, followed by a refresh icon and a menu icon. Below the search bar is a table with the following columns: "Identifier", "Providers", "Created", "Signed In", and "User UID". The table contains two rows of user data. At the bottom of the table, there is a pagination control showing "Rows per page: 50" and "1 - 2 of 2", along with navigation arrows.

Identifier	Providers	Created ↓	Signed In	User UID
tugelbaevajdyn59@gm...	📧	May 21, 2026	May 21, 2026	YU8MJ80md5RUqO9b5dIWw...
flay.gaming@mail.ru	📧	May 20, 2026	May 20, 2026	QvRJntUGNjX1P3pEWX1MdW...

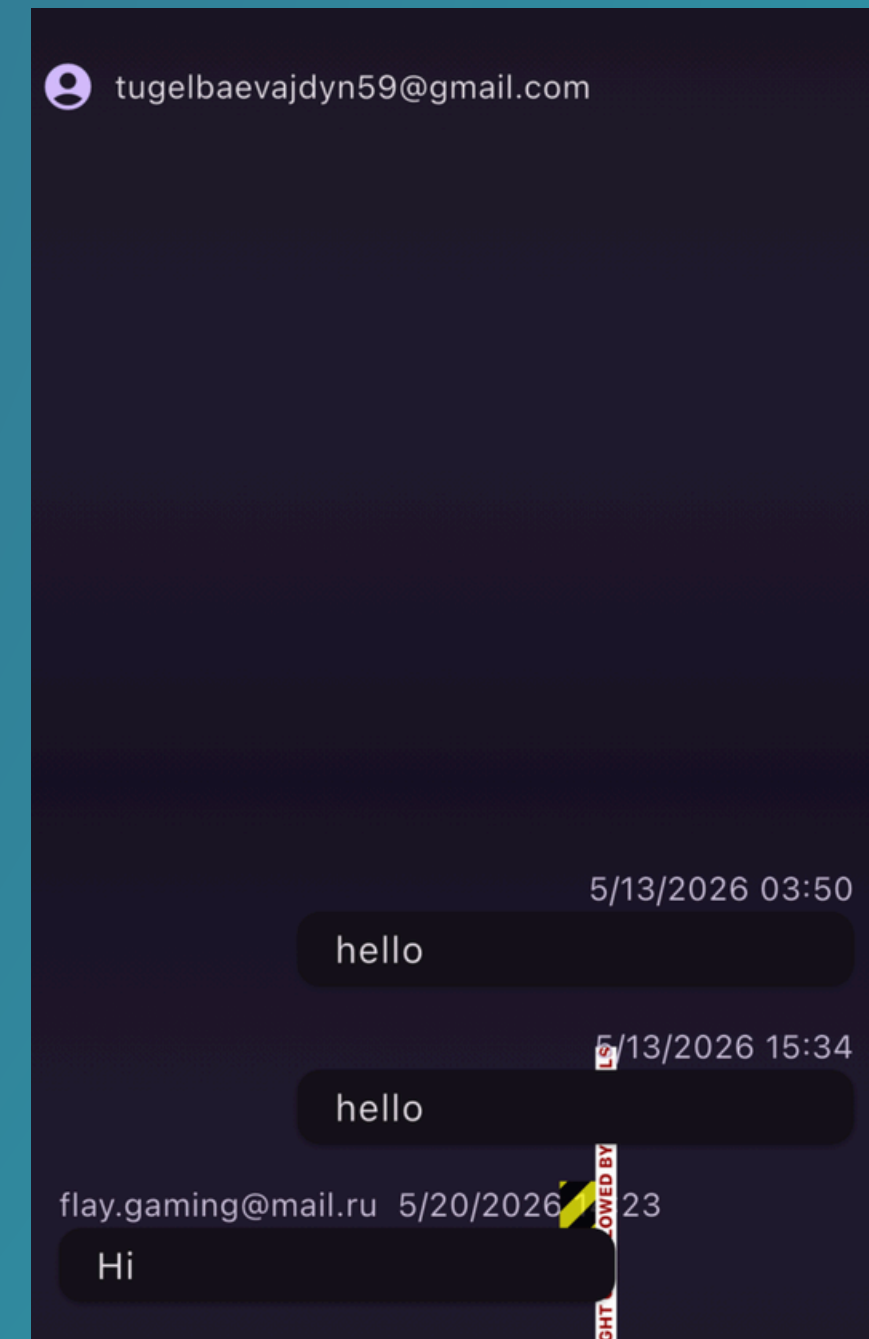

Rows per page: 50 1 - 2 of 2

The app interacts with Firebase. The email address of each new user is added to a list. Here you can manage accounts, delete an account, reset your password, and so on.

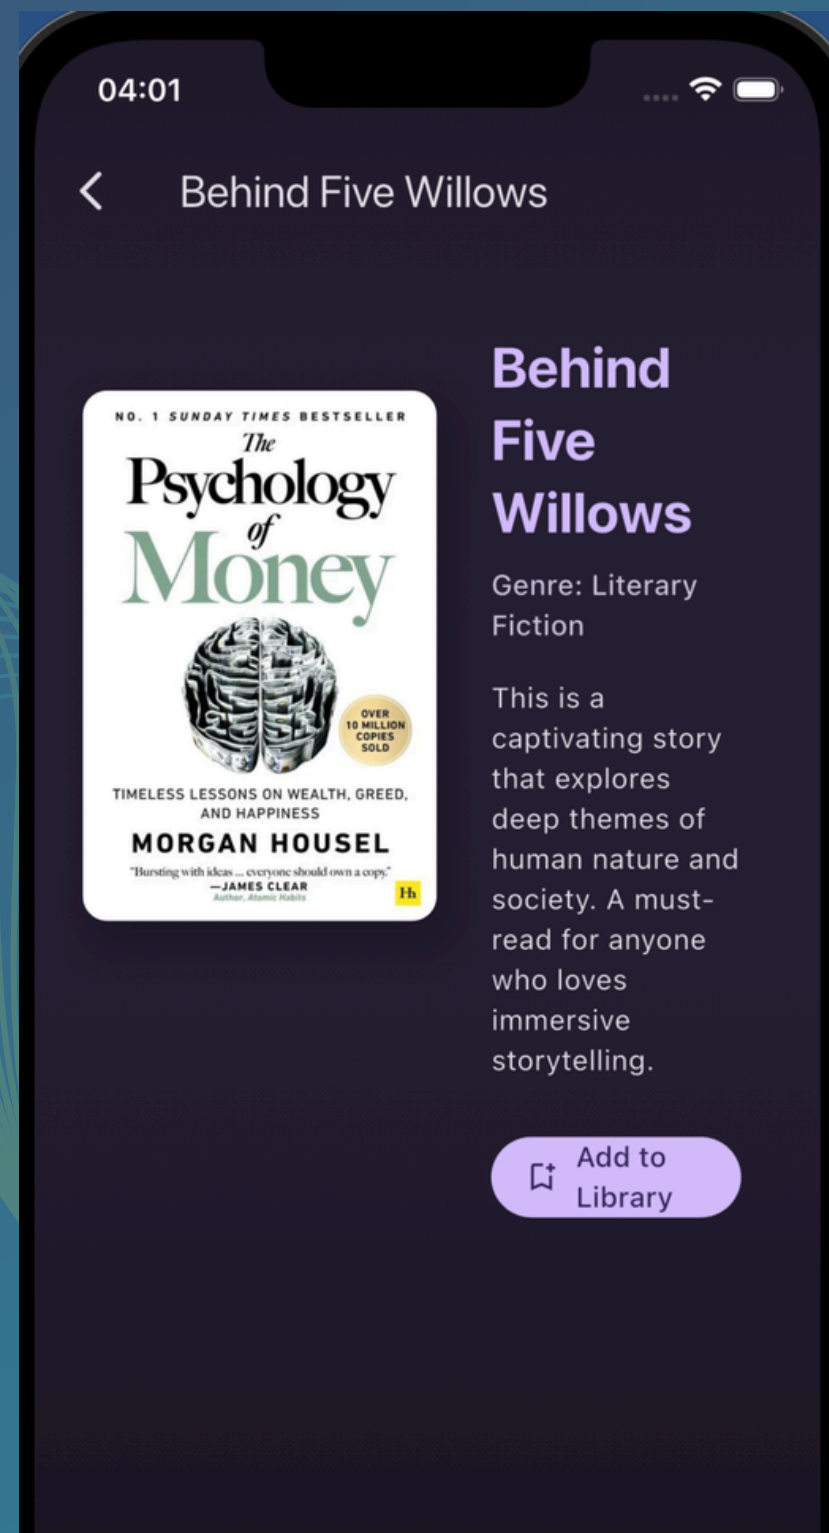

CHAT WITH USERS

There is a chat where different users can send messages to a chat visible to all users.

The date and time each message was sent is recorded.

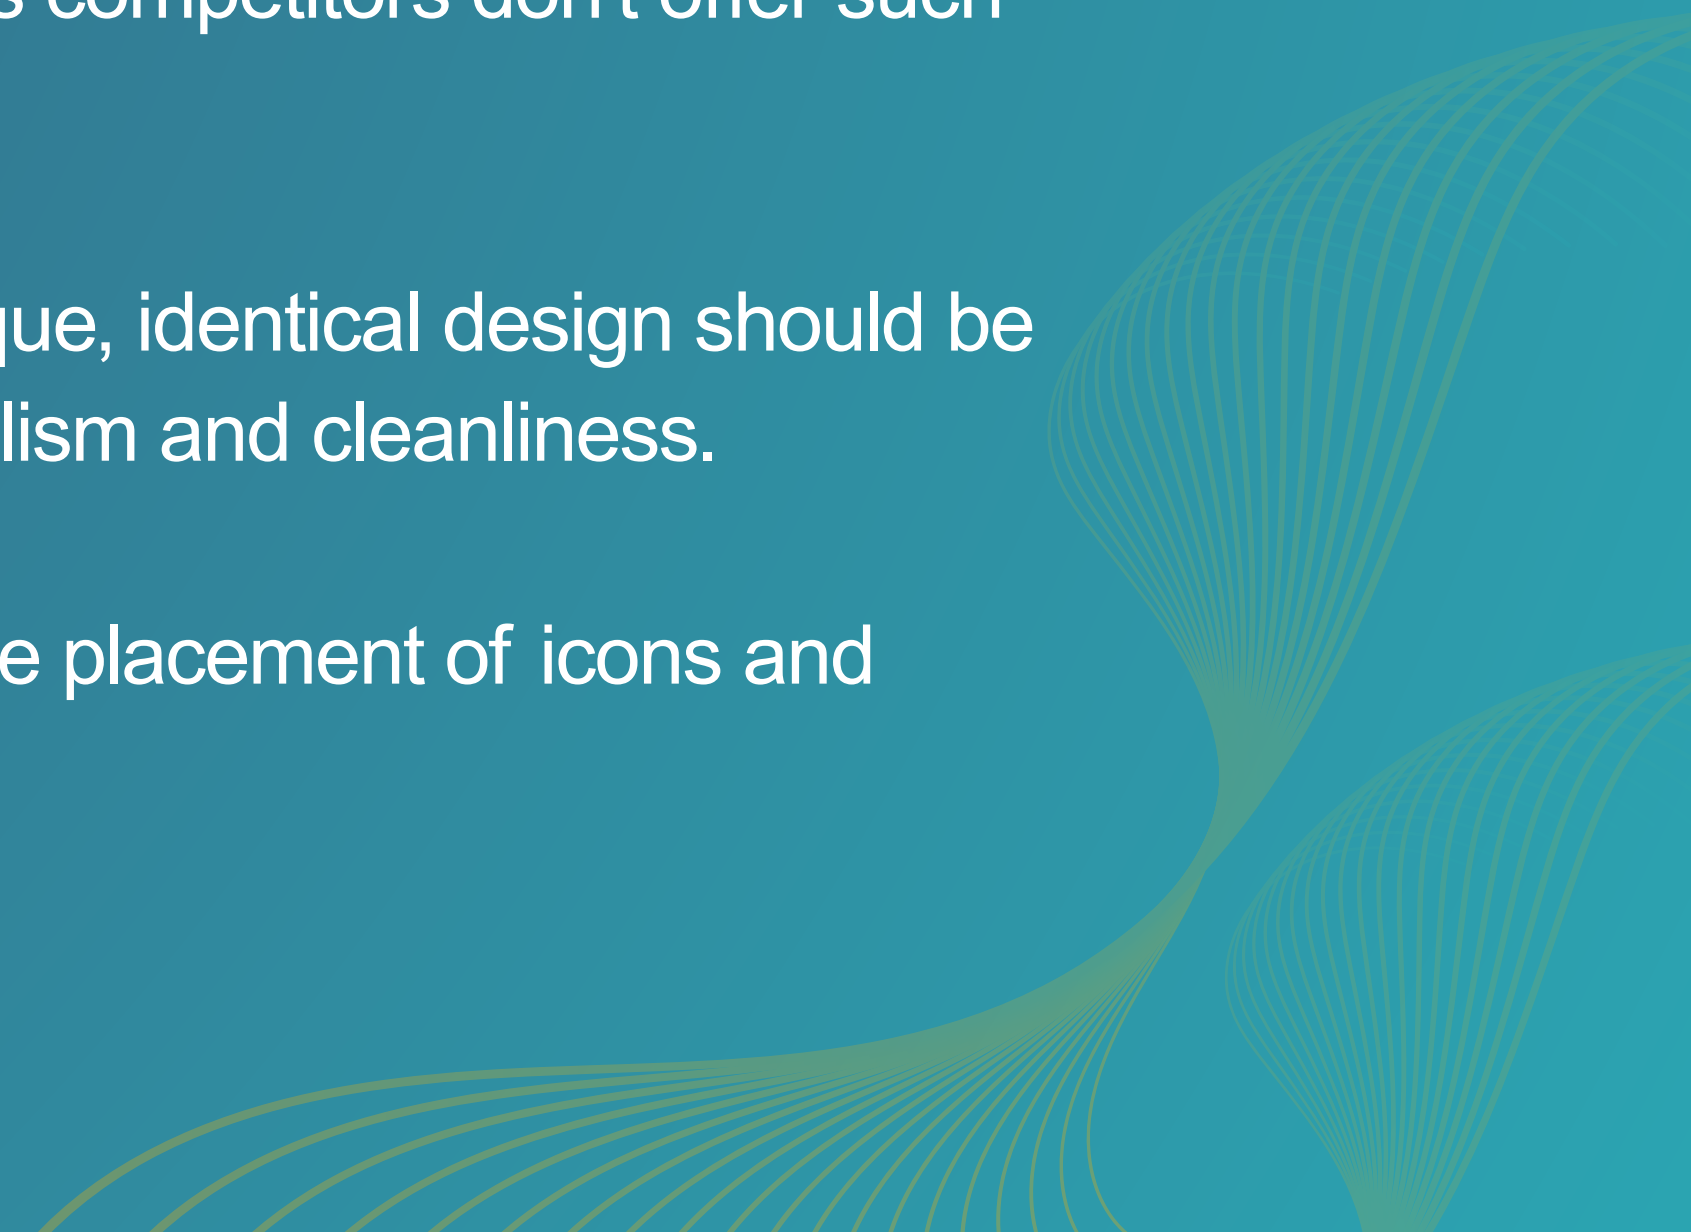

ANIMATIONS

Clicking on any book takes us to another page with information about that book. The page is translated using hero animation.

The application also has page transition, button animation, loading animation, scale animation, and so on.

FUTURE IMPROVEMENTS

1. First of all, I'd like to make sure they sell not only paper books, but also e-books. I think this idea will appeal to many book lovers, as competitors don't offer such opportunities.
 2. The project's design still needs some work. A unique, identical design should be created specifically for this project, adding minimalism and cleanliness.
 3. The user UI/UX experience needs some work. The placement of icons and buttons is the most important part of the project.
